EDUCATION

Degree	Institute	Year	CGPA
B.Tech in Chemical Engineering	I.I.T. Delhi (New Delhi)	2024	7.20
AISSCE (XII Standard CBSE)	Woodbine Gardenia School (Kanpur)	2020	96%

EXPERIENCE

ZFunds Distribution Private Limited

Gurugram, Haryana

Software Engineer

February 2025 – April 2026

- Designed and built a **real-time data synchronization pipeline** (DynamoDB Streams → Redpanda → PostgreSQL), **reducing cross-database inconsistencies by 10%** and eliminating manual reconciliation workflows.
- Built an in-house **commission payout system** using DuckDB, Python and a custom rule engine, eliminating outsourcing and **cutting a 3–5 day process** to an automated internal pipeline.
- Delivered end-to-end product features including UPI Autopay SIP (**35% increase in monthly sales**) and a scalable NestJS service for Fixed Deposit booking (**sales worth \$1M in 6 months**).

N.S.S. (National Service Scheme), IIT Delhi

New Delhi, India

Flutter developer

August 2023 – December 2023

- Built the UI for a cross-platform N.S.S. app at IIT Delhi and collaborated on integrating Firebase for login, registration, and map features, to allow students to register for NSS events and seminars.

Web developer (ReactJS)

January 2023 – May 2023

- Led the UI design and backend development team of Kaizen 2023's official website (IIT Delhi's social fest with 10,000+ footfalls), migrating the legacy codebase to ReactJS.

PROJECTS

Panda-Q: Message Broker | TypeScript, NodeJS | [Source Code](#)

- Designed and built a single-node message broker inspired by Kafka, implementing **topic-partition architecture**, consumer group assignment, and offset-based consumption with **at-least-once delivery guarantees**.
- Implemented durability using **write-ahead logging (WAL)** and metadata tracking, enabling reliable crash recovery and zero message loss across broker restarts.
- Engineered a **high-throughput ingestion pipeline** using batching and an in-memory buffer with periodic broker loops for efficient message routing and processing.
- Developed a REST-based **producer/consumer interface with partition assignment**, offset commits, and a TPC mapping system for scalable and consistent message consumption.

Auth Wave: Authentication Service | NextJS, TypeScript, Express, MongoDB | [Source Code](#) | [Link](#)

- Designed and built a **pluggable authentication service** supporting email-password, OTP, and Magic Link flows with **secure session and user management**.
- Implemented security mechanisms including API rate limiting, account lockout, and verification workflows to protect against abuse and unauthorized access.
- Developed a full-stack product with a **dedicated developer console**, transactional email workflows (Resend), and a published **NPM package** with comprehensive documentation for easy adoption.

TECHNICAL SKILLS

Languages: TypeScript, Rust

Backend: Node.js, Express, PostgreSQL, MongoDB, REST APIs, Distributed Systems Basics

Systems & Concepts: Concurrency, Message Queues, Write-Ahead Logging (WAL), Batching, API Design

Frontend: ReactJS/NextJS, React Native

Tools: Git, Docker
